

Corporate Presentation

May 2026

Cautionary note regarding forward looking statements and disclaimers

This presentation contains certain forward-looking statements about Curis, Inc. (“we,” “us,” or the “Company”) within the meaning of the Private Securities Litigation Reform Act of 1995, as amended. Words such as “expect(s),” “believe(s),” “will,” “may,” “anticipate(s),” “focus(es),” “plans,” “mission,” “strategy,” “potential,” “estimate(s),” “opportunity,” “intend,” “project,” “seek,” “should,” “would,” “likelihood,” and similar expressions are intended to identify forward-looking statements. Forward-looking statements are statements that are not historical facts, reflect management’s expectations as of the date of this presentation, and involve important risks and uncertainties. Forward-looking statements herein include, but are not limited to, statements with respect to the timing and results of clinical milestones; ongoing and future clinical trials and the results of these trials; expectations with respect to regulatory objectives; the clinical, therapeutic and market potential of emavusertib; our cash runway; the focus on emavusertib and management’s ability to successfully achieve its strategies and goals. These forward-looking statements are based on our current expectations and may differ materially from actual results due to a variety of important factors including, without limitation, risks relating to: regulatory action by the U.S. Food and Drug Administration (“FDA”) or any equivalent foreign regulatory agency with regard to our trials; whether emavusertib will advance further in the clinical development process and whether and when, if at all, it will receive approval from the FDA or equivalent foreign regulatory agencies; whether historical preclinical and clinical trial results will be predictive of future clinical trial results; whether historical clinical trial results will be predictive of future trial results; whether emavusertib development efforts will be successful; whether emavusertib will be successfully marketed if approved; our ability to achieve the benefits contemplated by our collaboration agreements; management’s ability to successfully achieve its strategies and goals; the sufficiency of our cash resources; our ability to raise necessary additional capital to fund our operations on terms acceptable to us and the use of proceeds of any offering of securities or other financing; general economic conditions; competition; and the other risk factors contained in our periodic reports filed with the Securities and Exchange Commission, including the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2025 and the Company's Quarterly Report on Form 10-Q for the quarter ended March 31, 2026 which are available on the SEC website at www.sec.gov. You are cautioned not to place undue reliance on these forward-looking statements that speak only as of the date hereof, and we do not undertake any obligation to update forward-looking statements to reflect events or circumstances after the date hereof, or to reflect the occurrence of or non-occurrence of any events, except as required by law.

This presentation includes statistical and other industry and market data that we obtained from industry publications and research, surveys, and studies conducted by third parties as well as our own estimates. All of the market data used in this presentation involves a number of assumptions and limitations, and you are cautioned not to give undue weight to such data. Industry publications and third-party research, surveys, and studies generally indicate that their information has been obtained from sources believed to be reliable, although they do not guarantee the accuracy or completeness of such information. Our estimates of the potential market opportunities for our product candidates include several key assumptions based on our industry knowledge, industry publications, third-party research, and other surveys, which may be based on a small sample size and may fail to accurately reflect market opportunities. While we believe that our internal assumptions are reasonable, no independent source has verified such assumptions.

EMAVUSERTIB

Novel IRAK4 - FLT3 inhibitor

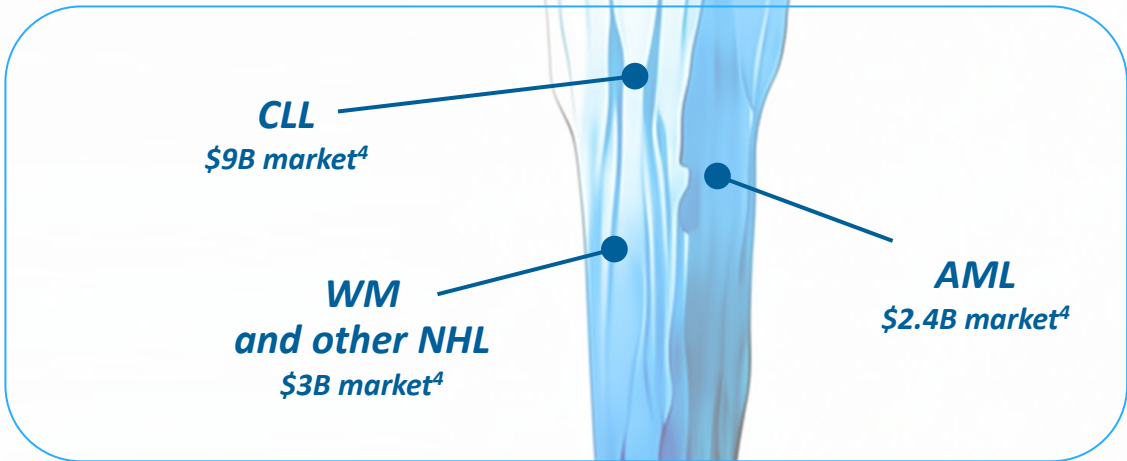

2 Proof-of Concept datasets demonstrate mechanism

	PRE-CLINICAL	CLINICAL		
	Validation of Mechanism	Dose Optimization	Proof of Concept	Registrational
Lymphoma				
PCNSL (ema + BTKi)	ORR in BTKi-experienced patients			ongoing
CLL (ema + BTKi)	convert PR to CR / MRD ⁻		ongoing	
WM (ema + BTKi)	convert PR to CR / MRD ⁻			
MCL (ema + BTKi)	convert PR to CR / MRD ⁻			
Leukemia				
mFLT3 AML (monotherapy)	CR in FLT3i-experienced patients			
AML (ema-ven-aza)	CR / MRD ⁻			
MDS (ema-aza)	CR / MRD ⁻			

plus 5 additional ISTs in solid tumors

Additional opportunities in other NHL subtypes and AML

Abbreviations: Primary Central Nervous System Lymphoma (PCNSL), Chronic Lymphocytic Leukemia (CLL), Waldenström’s Macroglobulinemia (WM), Mantle Cell Lymphoma (MCL), Marginal Zone Lymphoma (MZL), Diffuse Large B-cell Lymphoma (DLBCL), FLT3 mutation (mFLT3), Acute Myeloid Leukemia (AML), B-Cell Receptor (BCR), Toll-Like Receptor (TLR), Non-Hodgkin lymphoma (NHL)

Curis Leadership Team

Experienced and Accomplished

James Dentzer
President and CEO

Mr. Dentzer is Chief Executive Officer and a member of the Board of Directors of Curis. Mr. Dentzer joined Curis in 2016 and was named CEO in 2018. Prior to joining Curis, Mr. Dentzer held senior leadership positions with Dicerna, Amicus, and Biogen. In 2021, Mr. Dentzer was named a Top 25 CEO in Biotech by The Healthcare Technology Report and currently serves on the Board of Directors of Immunon. Mr. Dentzer holds a B.A. in Philosophy from Boston College and an M.B.A. from the University of Chicago.

Ahmed Hamdy
Chief Medical Officer

Dr. Hamdy is Chief Medical Officer of Curis. Prior to joining Curis, he served as CEO and Chairman of the board of directors of Vincerx Pharma, Inc. Prior to Vincerx, Dr. Hamdy co-founded Acerta Pharma, LLC, and served as its CEO and CMO. Before Acerta, Dr. Hamdy was CMO of Pharmacyclics, Inc. Dr. Hamdy is an Adjunct Professor and a member of the Dean's Council at UC Santa Cruz. Dr. Hamdy received his MBBCH from the KasrAlainy School of Medicine at the University of Cairo, Egypt.

Jonathan Zung
Chief Development Officer

Dr. Zung is Chief Development Officer of Curis, joining the company in May 2023. Prior to joining Curis, Dr. Zung served as Chief Development Officer of Evelo Biosciences where he was responsible for the operational design and execution of Evelo's clinical programs. Dr. Zung held previous leadership roles at WCG, Covance, UCB, BMS, and Pfizer. Dr. Zung also serves on the advisory board of Saama Technologies. Dr. Zung received his Ph.D. in analytical chemistry from Emory University.

Diantha Duvall
Chief Financial Officer

Ms. Duvall is Chief Financial Officer of Curis, joining the company in August 2022. Prior to joining Curis, Ms. Duvall served as CFO of Genocea Biosciences. She was the CAO of Bioverativ and responsible for developing the financial profile. Earlier in her career, she held financial leadership positions of increasing responsibility at Biogen, Merck, and PricewaterhouseCoopers. Ms. Duvall holds a B.A. in economics and public policy from Colby College and an M.S. in accounting and MBA from Northeastern University.

Emavusertib's mechanism targets key signaling pathways

In Lymphoma

- CLL and NHL are driven by NFkB dysregulation, which is in turn driven by two pathways: BCR and TLR¹
- Current standard of care targets BTK (in the BCR Pathway); emavusertib targets IRAK4 (in the TLR Pathway), combining emavusertib with BTKi enables a dual-blockade of NFkB

In Leukemia

- TLR signaling via IRAK4 has emerged as the leading driver of innate immune signaling in AML and MDS²
- Concomitant targeting of IRAK4 and FLT3 is the most effective means to overcome the adaptive resistance incurred when targeting FLT3³

¹ Bennett, Curr Opin Hematol. 2022, Grafone, Oncol Rev. 2012, Kelly, J Exp Med. 2015, Wang, Cancer Cell. 2023; ² Smith, Nat Cell Biol. 2019; ³ Melgar, Sci Transl Med. 2019

Emavusertib in CLL and NHL

Adding emavusertib to BTKi provides deeper responses

Mechanism of Action

these 2 pathways drive CLL & NHL

CLL and NHL

dual blockade of NF-κB enables stronger downregulation of NF-κB and deeper responses

Preclinical Evidence

Monotherapy vs. Combination in NHL model (OCI-Ly10)

TakeAim Lymphoma Clinical Outcomes, ASH 2023 Poster

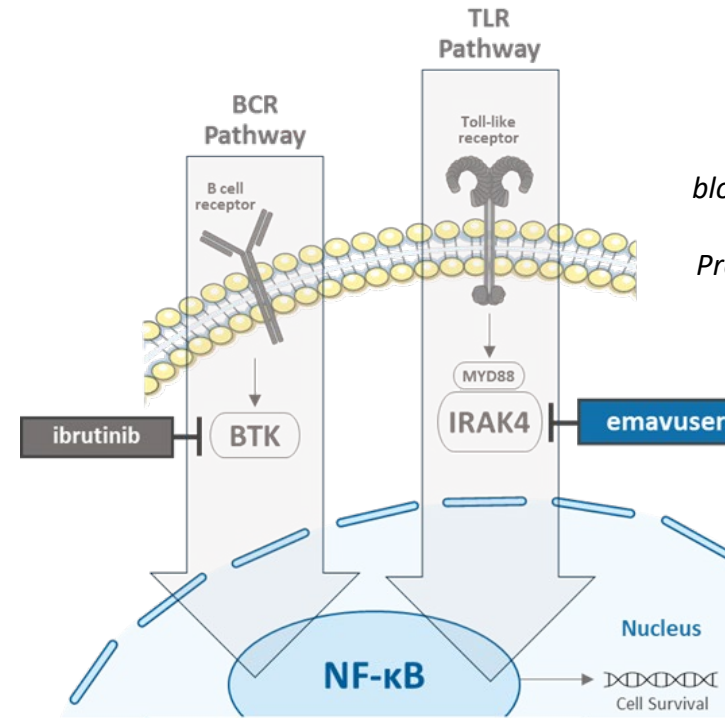

The goal in CLL and NHL is fixed duration, oral therapy

Emavusertib offers potential to achieve the “one and done” fixed duration benefit of CAR-T, but with an all oral therapy

2024 Market Leader
\$10.8B Revenue

NHL only

Current Therapies	Unmet Need / Limitation ¹
BTKi	<ul style="list-style-type: none"> Bleeding, bruising, headaches, fatigue, cardiac events Chronic dosing risks development of mutations/resistance Lack of complete remission
BCL2 - αCD20	<ul style="list-style-type: none"> On-target tox: TLS, IRR, neutropenia, thrombocytopenia Cannot re-treat after progression on BCL2 per label
CAR-T	<ul style="list-style-type: none"> Requires specialty center (long vein-to-vein time) Requires long-term immunosuppression On-target tox: CRS, neurotoxicity, cytopenias
Bispecifics	<ul style="list-style-type: none"> On-target tox: CRS, neurotoxicity
ADCs	<ul style="list-style-type: none"> Nonspecific linker cleavage leads to off-target toxicities leading to myelosuppression, neuropathy, and eye tox
Chemotherapy	<ul style="list-style-type: none"> Chemotoxicity

emavusertib + BTKi

Binds to IRAK4 and BTK, blocking BCR and TLR pathways

Provides deeper responses than BTKi monotherapy

Abbreviations: Tumor Lysis Syndrome (TLS), Infusion-Related Reaction (IRR), anti-CD20 (α-CD20), Cytokine Release Syndrome (CRS), Antibody-Drug Conjugate (ADC)

¹ USPIs for ibrutinib, acalabrutinib, zanubrutinib, pirtobrutinib, venetoclax, and axicabtagene ciloleucel

Clinical Study Design in CLL and NHL

Three-part design

- **Part A: Dose Escalation**
 - 50 mg QD → 400 mg BID
 - monotherapy and combination
 - multiple NHL subtypes, including PCNSL, CLL, WM, and MCL

- **Part B: Study to support filing for Accelerated Approval**
 - PCNSL only; BTKi-experienced patients
 - single-arm study that adds emavusertib to a patient's BTKi regimen directly after they progress on BTKi monotherapy
 - benchmark: none²

- **Part C: Study to support filing for Full Approval**
 - PCNSL only; BTKi-naïve patients
 - randomized study comparing BTKi monotherapy vs. BTKi + emavusertib
 - benchmark: 39%¹ for ibrutinib monotherapy

¹ Soussain, Eur J Cancer 2019; ² there is no standard of care for PCNSL patients who progress on treatment with a BTK

Part A: early evidence of monotherapy and combination activity in dose escalation study with multiple NHL subtypes

dose escalation (50-400mg)

IgM values were used as the measure for tumor burden for WM and LPL patients; Sum of product of diameters of target lesions used for other lymphoma types

dose escalation in CLL, WM, MCL, PCNSL (100-300mg)

Data above include all patients treated with emavusertib + ibrutinib combination who completed at least 1 cycle and had calculable postbaseline tumor, using the sum of products of diameters of target lesions for MCL and CLL, and IgM levels for WM.

Cutoff date: May 1, 2025

Abbreviations: Minor Response (MR), Partial Response (PR), Complete Remission (CR)

Parts B & C: registrational study design in PCNSL

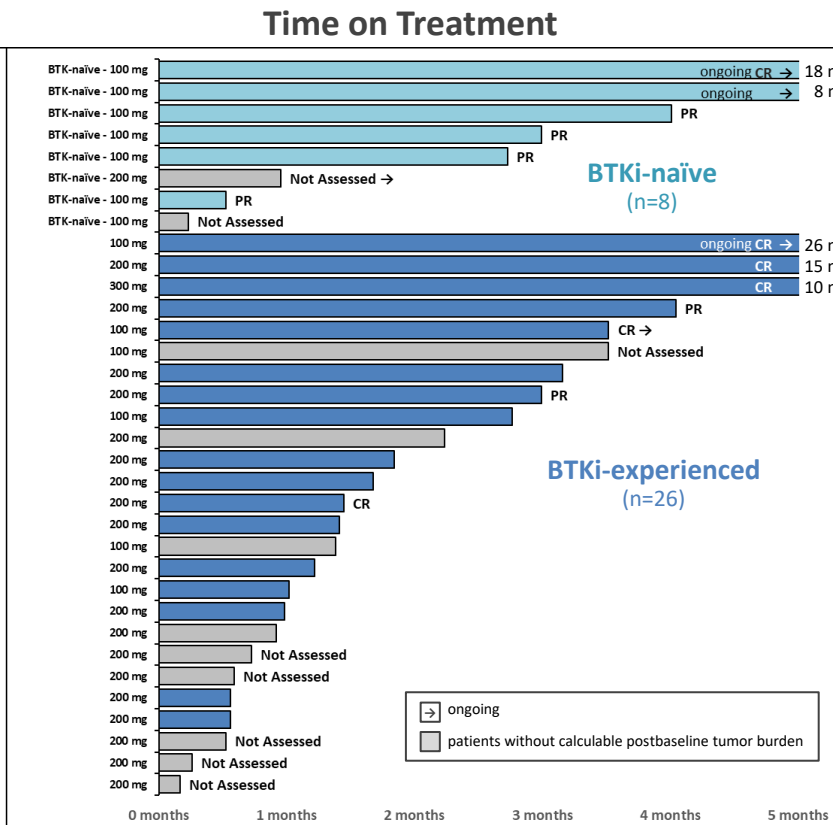

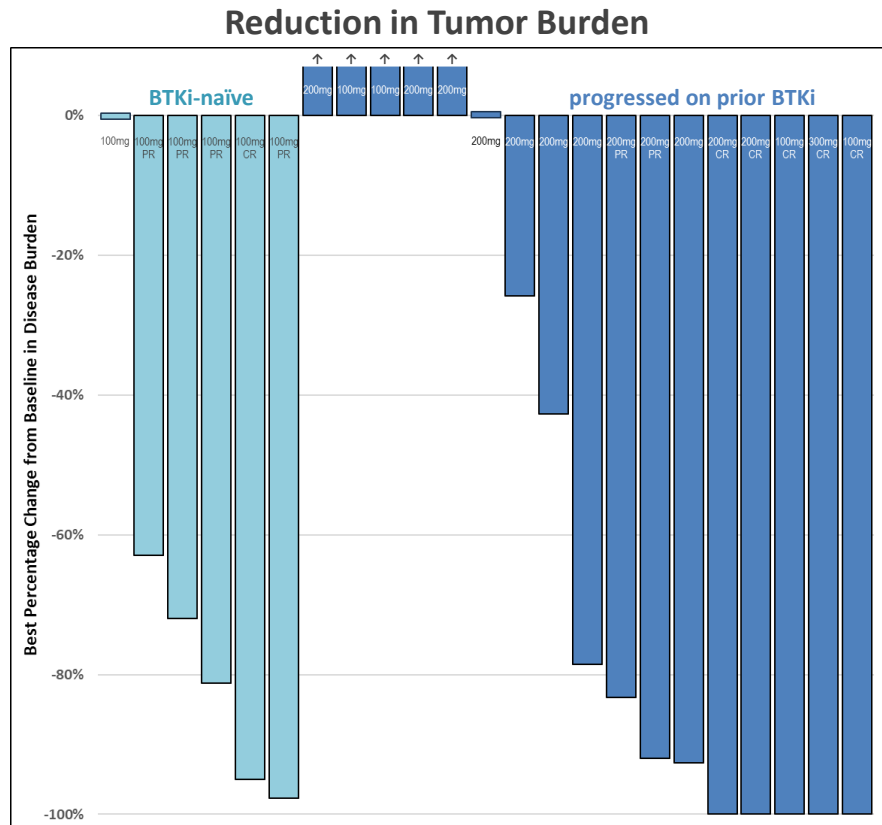

Goal:
 Demonstrate that BTKi + emavusertib can achieve deeper responses than BTKi monotherapy

Goal:
 Demonstrate that adding emavusertib to a patient's BTKi regimen directly after they progress on BTKi monotherapy can reverse tumor growth and enable patients to achieve objective responses

¹ Shi, Medicine, 2025 ; ² Soussain, Eur J Cancer 2019; ³ there is no standard of care for PCNSL patients who progress on treatment with a BTK

Ongoing registrational study in PCNSL demonstrates that adding emavusertib to ibrutinib provides deep and durable responses

**BTKi-naïve
63% ORR**

(5 of 8)

Benchmark: 39%¹

**BTKi-experienced
27% ORR**

(7 of 26)

Benchmark: n/a²

Data include all PCNSL patients treated with emavusertib in combination with BTKi in Parts A, B, and C with calculable postbaseline tumor burden at cutoff date

Data include all PCNSL patients treated with emavusertib in combination with BTKi in Parts A, B, and C as of the cutoff date

Cutoff date: May 1, 2025

Abbreviations: Intent to Treat (ITT), overall response rate (ORR)

¹ Soussain, Eur J Cancer 2019; ² there is no standard of care for PCNSL patients who progress on treatment with a BTK

Well tolerated safety profile with duration > 1-2 years

emavusertib monotherapy

- Well tolerated
- Durable safety profile > 1-2 years
- Emavusertib crosses the BBB
- No dose-limiting myelosuppression or CNS toxicities
- 2 DLTs in monotherapy at 400 mg BID (CPK increase and rhabdomyolysis)
- 2 DLTs in combination at 300 mg BID (syncope and stomatitis)

Preclinical evidence for IRAK4 in CLL

- Inhibition of IRAK4 blocks survival and proliferation of [CLL](#) cells¹
- Dual inhibition of IRAK4 and BTK is significantly more potent in patient [CLL](#) cells than either drug alone²
- Differences in TLR function represent an independent and earlier event than acquired mutations in [CLL](#)³ and TLR activation generates de novo resistance to ibrutinib in [CLL](#) and MCL⁴
- IRAK4 inhibition decreases the viability and proliferation in patient-derived [CLL](#) cells, including those without MYD88 mutations, suggesting IRAK4 promotes tumorigenesis independent of MYD88 mutation⁵

IRAK4i + BTKi reduces patient CLL cell viability, regardless of MYD88 status

Giménez, Leukemia. 2020

Dual targeting with IRAK4i + BTKi is superior to single agents in CLL

Dadashian, Cancer Res. 2019

Ibrutinib-treated CLL survival signaling is sustained via TLR pathways

Gounari, Leukemia. 2019

¹ Giménez, Leukemia. 2020; ² Dadashian, Ca Res. 2019; ³ Gounari, Leukemia. 2019; ⁴ Jayappa, Leukemia. 2017; ⁵ Pirrondo, Front Immunol. 2023

Ongoing Ph2 study in CLL

Goal:

Replicate Preclinical Findings in a Ph2 Study

Preclinical Study

TakeAim Lymphoma Clinical Outcomes, ASH 2023 Poster reporting monotherapy vs. combination in NHL model (OCI-Ly10)

Adding Ema to BTKi provided deeper responses than BTKi alone

CLL Clinical Study Design	
Study Design:	single-arm
Dosing & Admin:	200 mg BID, orally in combination with BTKi
Primary Endpoint:	uMRD
Secondary Endpoints:	CR, DOR, PFS
Study Population:	Patients on a BTKi who have achieved PR but remain MRD ⁺
Study Size:	n=40

Will adding Ema to BTKi enable deeper PRs or CR/MRD?

MRD emerging as new primary endpoint in CLL

Regulatory Support for MRD

WEEK IN REVIEW:
Dr. Brian G.M. Durie

A Historic Turning Point: ODAC Unanimously Votes in Favor of MRD Testing as an Early Endpoint in Myeloma Clinical Trials to Support Accelerated Approvals of New Treatments

Post date: April 18, 2024

Minimal residual disease negative: A novel endpoint for accelerated approval; What providers should know

Sruthi Ranganathan^a, Vinay Prasad^b

Approved Assay for MRD

MRD in CLL: some answers, "Assay is key"

clonoSEQ®
THE FIRST & ONLY FDA-CLEARED ASSAY FOR MRD DETECTION

In bone marrow from patients with multiple myeloma and B-cell acute lymphoblastic leukemia (ALL) and blood or bone marrow from patients with chronic lymphocytic leukemia (CLL)

MRD: A powerful way to assess response and predict patient outcomes
Measurable (or minimal) residual disease (MRD) refers to the small number of cancer cells that may remain in a patient's body during and after treatment. Clinical practice guidelines recognize that MRD status is a reliable indicator of clinical outcome and response to therapy in myeloma, ALL and CLL patients.^{2,3,4}

The clonoSEQ® Assay is an MRD assessment tool powered by next-generation sequencing (NGS) technology and differentiated from other NGS assays by groundbreaking advances in chemistry and proprietary bioinformatics.^{5,6}

Clinicians who leverage the latest advances in personalized medicine use clonoSEQ to:

- ✓ Predict long-term outcomes
- ✓ Assess treatment response
- ✓ Monitor disease burden
- ✓ Detect potential relapse

Clinical Trials using MRD in CLL

- Venetoclax-Obinutuzumab +/- Acalabrutinib in R/R CLL Phase3 [NCT04560322](#)
- Mosunetuzumab for CLL MRD Clearance Phase 1/2 [NCT07052695](#)
- MRD Guided Sonrotoclax and Zanubrutinib in Newly Diagnosed CLL/SLL Phase3 [NCT06367374](#)
- Pirtobrutinib (LOXO-305) Consolidation for MRD Eradication in Patients With CLL/SLL Treated With Venetoclax Phase 1/2 [NCT05317936](#)
- Ibrutinib in Combination With Obinutuzumab Versus Chlorambucil in Combination With Obinutuzumab in Patients With Treatment naïve CLL/SLL Phase 3 [NCT02264574](#)

Summary in CLL and NHL

- Adding emavusertib to BTKi provides deep and durable responses in PCNSL

in patients who progressed on BTKi:

27% ORR vs. *n/a*¹

in BTKi-naïve patients:

63% ORR vs. *39% for ibrutinib*²

- Initiating Phase 2 in larger subtypes, starting with CLL
 - Early data in CLL, WM, and MCL show consistent pattern of activity
 - Emavusertib offers potential to achieve the fixed duration benefit of CAR-T, but with an oral-oral therapy

¹ There is no standard of care for PCNSL patients who progress on treatment with a BTKi.; ² Soussain, Eur J Cancer 2019

TLR and FLT3 pathways drive disease in AML
blocking both pathways provides deeper responses

	Current Therapies	Unmet Need / Limitation
<i>fit</i>	(1 st Line) Chemo + FLT3i	• Low 5yr OS (22%), myelosuppression
<i>unfit</i>	(1 st Line) HMA + Ven	• FLT3i resistance (driven by IRAK4)
	(2 nd Line) FLT3i	• Low response rate (21% composite CR)
		• FLT3i resistance (driven by IRAK4)
	HSCT	• Patient must be in remission
		• Risk of rejection, GVHD

IRAK4-L is a disease driver in nearly all AML patients

IRAK4-L is oncogenic

Knocking out IRAK4 stops leukemic activity

adding back IRAK4-L restarts activity

adding back IRAK4-S has no effect

IRAK4-L is expressed in nearly all AML patients

Emavusertib's dual blockade of IRAK4 and FLT3 has the potential to outperform approved FLT3 inhibitors

Because IRAK4 drives adaptive resistance to FLT3i

Concomitant targeting of IRAK4, alongside FLT3, is the most effective means to overcome the adaptive resistance incurred when targeting FLT3¹

¹ Melgar, Sci Transl Med. 2019

Ph 1/2 study design in AML

Goal: Demonstrate dual blockade of IRAK4 and FLT3 can overcome adaptive resistance to FLT3i

Composite CR Rate = CR + CRh/i
